

VLS9000

- Prevent cable from ever reaching damaging velocity
- Ideal for applications requiring frequent connections
- Provide safer operation in mobile operations
- Eliminate the chance of breaking a cable

The new patent-pending Celesco Velocity Limiting System (VLS) is an option for PT9000 Series cable extension transducers that limits cable retraction to a safe 40 to 50 inches per second. It prevents a cable from ever reaching a damaging velocity during an accidental free release. VLS is ideal for mobile applications that require frequent cable disconnection and reconnection. It prevents expensive unscheduled downtime due to accidental cable

mishandling or attachment failure. VLS is available for the Celesco PT9000 Series, but not with high cable tension or stainless steel enclosure options. Use the ordering guide below to configure a VLS transducer.

Ordering Information

The appropriate PT9000 Series transducer can be selected from any model found in the Celesco PT9000 and PT9000 Extended sections in the Celesco catalog. VLS is used as a prefix for all VLS model designations.

*VLS is only available with aluminum enclosure and nylon-coated or thermoplastic measuring cable.
